

## Gravel Road Maintenance Workshops

**February 28, 2012**  
**Harrisonburg, VA**  
VDOT Residency

**March 15, 2012**  
**Charlottesville, VA**  
UVA Zehmer Hall

**Provided by Virginia Department of Forestry (VDOF) and the  
Virginia Department of Transportation (VDOT)**

### **Who Should Attend:**

Managers for municipalities, counties, state and federal properties, and private landowners responsible for soil/gravel road maintenance

### **Purpose:**

The state has a network of 9,467 miles of soil/gravel roads. This is about 20 percent of the secondary roads in the Commonwealth. There is an additional network of soil/gravel roads that are maintained by authorities other than Virginia Department of Transportation. A common thread for the management of all of the soil/gravel roads in Virginia is that poor management of this road type results in tons of sediment entering Virginia waterways. Learn how to be a part of the solution for sediment-polluted waters from soil/gravel roads. The experts will present maintenance methods and applications.

**More information will be available on the VDOT and VDOF websites January 2, 2012.**
